

Injury Prevention for Children and Teens

Module 6: Adolescent Substance Use and Injury

Learning Objectives

Continuing Medical Education (CME)

At the end of this activity, participants will be able to:

- Recognize the rationale for early interventions for adolescent substance use and consider this in providing care
- Relate rates of substance use among youth to association with injury
- Describe alcohol and cannabis-related consequences including injury
- Identify shared socio-ecological risk and promotive factors for substance use and injury among youth
- Compare effects of substance use interventions among youth with regards to a reduction in substance use and associated injuries
- Identify interventions used to reduce opioid prescribing after surgery

Certified Health Education Specialist (CHES) Continuing Education

- Relate rates of substance use among youth to association with injury
- Describe alcohol and cannabis-related consequences including injury
- Identify shared socio-ecological risk and promotive factors for substance use and injury among youth
- Compare effects of substance use interventions among youth with regard to a reduction in substance use and associated injuries
- Express rationale for early interventions
- Explain acute care prescribing of opioids
- Summarize the rates of new chronic opioid use after surgery
- Discuss the estimated number of unused pills from surgery, list ways to reduce diversion to the community and better methods of safe disposal
- Identify interventions used to reduce opioid prescribing after surgery
